**Affidavit of Giuseppe Aliperti, M.D.**

My name is <sup>ia</sup>Giuseppe Aliperti, M.D.

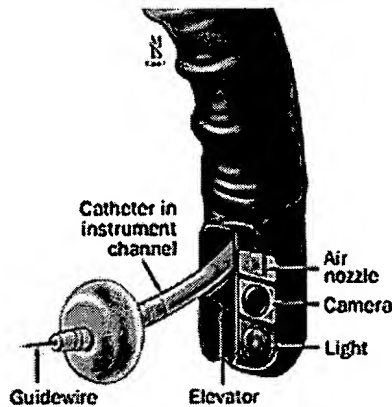

My c.v. is attached hereto as Exhibit A.

I have examined U.S. Patent 4,474,174 to Petruzzi.

As part of my duties as a gastroenterologist, I am familiar with and use the endoscopic instruments of the type disclosed in the Petruzzi patent.

The procedure for endoscopic visualization of the ampulla of Vater is usually performed on a conscious, but sedated patient. A fiberoptic endoscope is introduced by mouth and advanced through the upper GI tract until the second portion of the duodenum is reached. Under direct visualization using the endoscope the ampulla of Vater is located and inspected. A small catheter is then advanced out of the endoscope through the ampulla of Vater and into the pancreatic and biliary duct systems.

As indicated in the following sketch, the catheter is advanced out of the endoscope in the same direction the camera of the endoscope is facing.

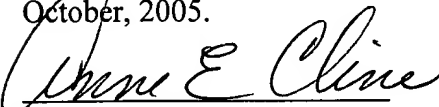

Direct visualization of the ampulla of Vater requires that the endoscope camera be pointing at the ampulla, in the same direction the catheter subsequently extends. The camera and the catheter both point perpendicularly from the side of the endoscope and are in the same plane.

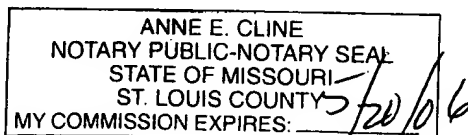

It would be impractical for the side of the endoscope which contains the camera to point in a direction different from the direction in which the catheter is subsequently extended (and thus be in a different plane). The whole point of direct visualization is to facilitate the accurate placement of the catheter in the ampulla of Vater.

Further affiant sayeth not.

  
A Giuseppe Aliperti, M.D.

## CURRICULUM VITAE

August 21, 2005

Dr. Aliperti has dedicated his career to the management of diseases of bile ducts pancreas and tubular GI tract once exclusively in the surgical domain. He has spent ten years on the Faculty at the Washington University School of Medicine where he served as Director of Interventional and Pancreaticobiliary Endoscopy. Dr. Aliperti is Board Certified in Internal Medicine and Gastroenterology. In addition to having presented his research at national conferences, he has given more than 700 invited lectures locally and worldwide. He has founded the Midwest Therapeutic Endoscopy Consultants in St. Louis, a private group practice with focus on Interventional Endoscopy.

**Affidavit of Larry Paskar, M.D.**

My name is Larry Paskar, the inventor in the present case.

I have been a licensed and practicing physician since 1975.

My c.v. is attached as Exhibit A.

I have worked in hospitals continuously since 1974.

I have never heard of a "catheterization removal medical procedure".

In my opinion as a practicing physician, there is no recognized "catheterization removal medical procedure" or "catheter removal medical procedure".

Catheters are removed from patients regularly, but the removal of a catheter is not a "medical procedure" as that phrase is used in the medical arts.

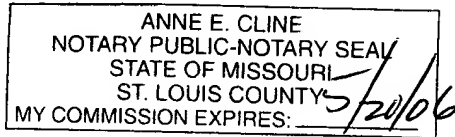

Further affiant sayeth not.

Larry Paskar MD
